AUSGEWÄHLTE FORSCHUNGSERGEBNISSE
SELECTED RESEARCH REPORTS

Filled Skutterudites — Physics and Chemistry of Iron Antimonides of Alkali, Alkaline-Earth, and Rare-Earth Metals 95

Low-Field Magnetic Investigations of the Superconducting State in PrOs4Sb12 106

Orbital (Two-Channel) Kondo Effect Problem in Nonmagnetic PbFCl-Type Pnictide Chalcogenides 109

Advances in Clathrate Research 116

Soft Preparation of Intermetallic Phases: New Metastable Modification of Germanium in Form of an Empty Clathrate-II 128

Sn-NMR Study on the Correlated Semimetals U2Ru2Sn and CeRu4Sn6 131

Nuclear Magnetic Resonance Investigations of Intermetallic Compounds 136

Frontiers of NMR in Pulsed High Field Magnets 141

Unusual Metallic Properties in Cubic FeGe at High Pressure 146

Ternary Intermetallic Palladium Compounds with Anionic Partial Structures 149

Smeared Ferromagnetic Quantum Phase Transition in CePd1−xRhx 153

Magnetic Properties of the Quantum Critical Point in YbRh2Si2 156

Systematic Study of the Grüneisen-Ratio near Quantum Critical Points 160

Kondo-Ion Electron-Spin Resonance 165

Hall-Effect Evolution across a Heavy-Fermion Quantum Critical Point 169

Preparation and Bonding Peculiarities of Ternary Boron Compounds with Magnesium and Rhodium 174

Inverse Rare-Earth Perovskites of Main-Group Metals — Evolution of Properties and Chemical Bonding 180

Stacking Design in Inverse Perovskites: The System (Sr3−xBax)Bi 191

Chemical Bonding in Metal-Rich Nitrides of Indium 194

(Ca7N4)[Mx] — Metal Chains in Subnitrides 201

Sr2[Ni(CN)]2: The Role of Carbon During Nitride Formation 206

Redox-Intercalation of Hydrogen and Nitrogen in Alkaline-Earth Subnitrides 209

Ternary Carbides from the Point of View of Carbometalates 212

Low-Valency Carbomolybdates and -tungstates 215

Quantum Criticality and Superconductivity in the Heavy-Fermion Compound CeCoIn5 219

Two Distinct Superconducting Phases in CeCu2Si2 225

Nature of the Magnetic Order in CeCu2Si2 and Interplay with Superconductivity 229

A Case Study of Complex Metallic Alloy Phases: Stability, Structure and Disorder Phenomena of Mg-Pd and Ag-Mg Compounds 232

The Nature of Laves Phases: An Explorative Investigation of the Nb-Co System 237
Structural Complexity without Pentagonal Symmetry: New Binary Gallides and Aluminides Prepared by High Temperature Centrifugation Aided Filtration 243

Crystallization Processes in Metallic Systems with Miscibility Gap in the Liquid State 246

Cu$^{II}$-Materials — Crystal Chemistry Meets Magnetism 250

Bose-Einstein Condensation of Magnons in Cs$_2$CuCl$_4$ 255

First Experimental Realization of a Frustrated Ferromagnetic Square-Lattice System 258

Frustrated Square-Lattice Ferromagnets 263

The Correlation between Bonding Relationships and Ionic Volume Increments Exemplified by Metal Hydrides and some Intermetallic Compounds 270

'The Birth of a Crystal': Atomistic Simulation Studies of Crystal Nucleation 273

Molecular Dynamics Simulations of Pressure-Induced Phase Transitions: From Unit Cells to 'Real' Materials 276

Transition-Metal Borophosphates — Complex Inorganic Frameworks and Magnetism 284

Chemical Transport of Rare-Earth Compounds with Complex Anions 288
